

Google App Engine IDE Runs Code with Python 2.7:

Setup Python Path:

Add Path of the File:

Add Code inside of it:

```
import webapp2
```

```
class MainHandler(webapp2.RequestHandler):
```

```
    def get(self):
```

```
        self.response.write('Hello world!')
```

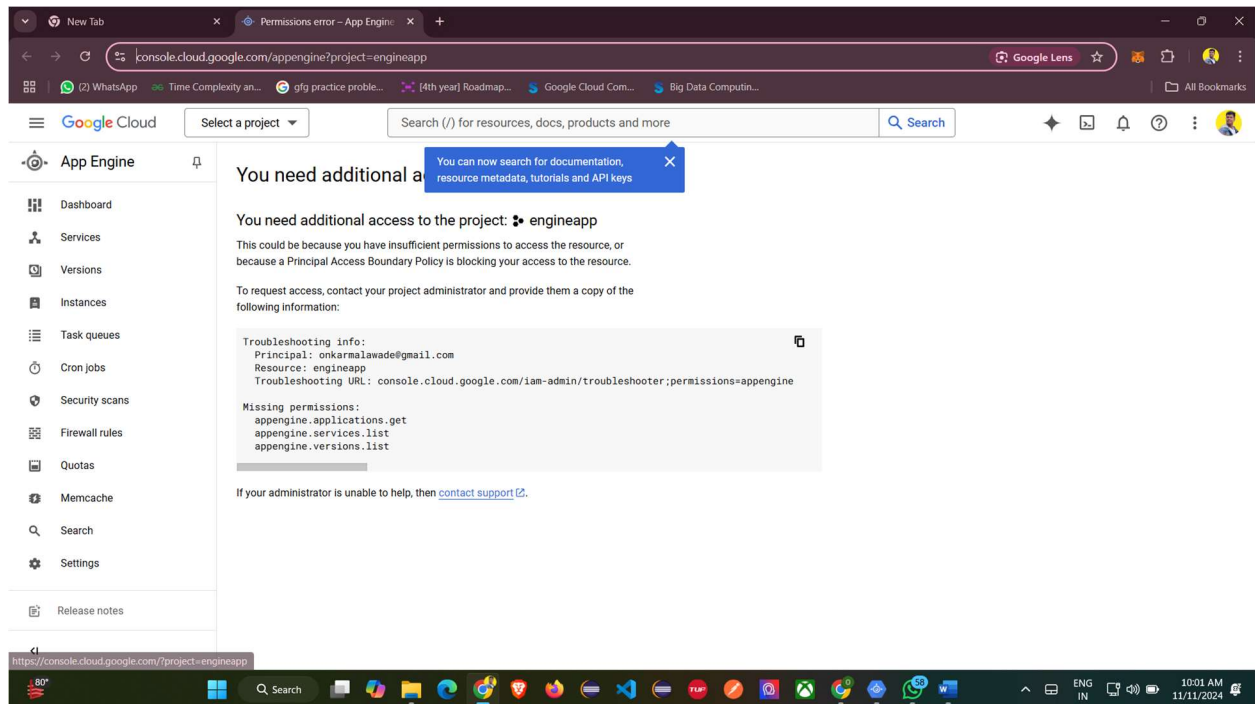

```
    app = webapp2.WSGIApplication([
```

```
        ('/', MainHandler)],
```

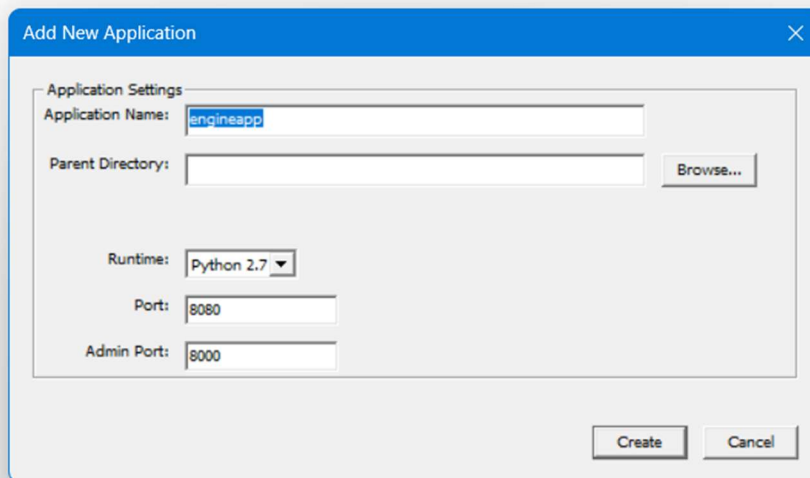

```
    debug=True)
```

Google App Engine Configuration:

Add New Application in Google App Engine:

Browse For Folder in Google App Engine:

Run the Localhost port that Setup:
